Discover Mdm Tan's journey of resilience and independence post-liver transplant. Her story embodies the spirit of hope and renewal this International Women's Day.

“My liver condition limited my ability to enjoy activities, and worsened my eczema to the point where the itchiness was unbearable. Persistent diarrhea further restricted my mobility. The liver transplant restored my independence and enabled me to lead an active life once again. I'm happy to be able to go for nature walks and return to my role of being a teacher. - Mdm Tan S.C., liver transplant recipient

As Singapore's only centre that provides adult and paediatric transplant services, the team at the National University Centre for Organ Transplantation (NUCOT) has been advancing medical boundaries and fostering hope since 1970. To learn more, visit [for.sg/nucot](https://for.sg/nucot)

National University Hospital

“ Before my liver transplant, I experienced constant fatigue and breathlessness. I'm thankful that I underwent a liver transplant, as it restored my independence and enabled me to lead an active life once again. ”
